

# Meet Your ESRD Network

ESRD Networks are contracted by the Centers for Medicare (CMS) to work with patients within the ESRD and transplant populations and the various facilities that serve the unique healthcare needs of these individuals. ESRD Networks provide dialysis facilities and transplant centers support in meeting CMS goals, satisfying data reporting requirements, mediating conflicts concerning patients, and improving the quality of life of those living with kidney disease. We assist dialysis providers with quality improvement processes to maintain high quality of care for ESRD patients. Engagement and collaboration with the ESRD Network is a requirement for these facilities, as stated in the Medicare Conditions for Coverage.

Qsource ESRD Networks currently provide support for ESRD Network 10, which encompasses the state of Illinois, and ESRD Network 12, which includes Iowa, Kansas, Missouri, and Nebraska.
